

BE 85 Tower Yarder

The **BE 85 Tower Yarder** is the largest model in the Brightwater range, with good reach, fast line speeds and plenty of power. Built to extract the largest trees, uphill and downhill, the BE 85 has an 85ft telescoping tower, with eight hydraulic guy winches. The unit is mounted on a purpose built track base, with two speeds and can negotiate grades up to 50 per cent. Setup and relocation is quick and efficient. The yarder can log a full 170 degrees from one setup, ensuring maximum time harvesting.

The BE 85 has an OPS and FOPS rated cab with excellent visibility of the drum set. The 450hp electronically controlled engine is coupled to a six speed powershift transmission, driving and controlling the four winches. Reach is almost 700m with 28mm skyline and mainline (skidline) capacity is up to 870m.

All Brightwater products are supported with full service and parts back up through our nationwide branch network and distribution partners.
