

## PLC AIR CONTROL SYSTEM

The **Brightwater PLC Air Control System** delivers precision logging by providing the Yarder operator increased speed and accuracy.

The system allows operators to swap between Grapple, Carriage or Scabbing with the simple press of a button and gives operators the ability to locate the next log with audible and visual indicators. The Brightwater PLC Air Control System also has line tension monitoring and individual drum control. Trouble shooting is made easy through using the visual test points screen and alarm function.

All Brightwater products are supported with full service and parts back up.
